M319 AP Computer Science Principles
Introduction to HTML/CSS/JS
Hello, World!
Example and Enhancements

1. Using Notepad++, type in the *Hello, World!* document.
2. Save your document as *Hello.html* in your *M319* folder.
3. Open *Hello.html* in a browser (preferably Chrome) to run it.
4. Once you are sure all parts of it are working properly, work on the following list of enhancements.

Enhancements:
1. Change the color scheme to reflect your preferences.
2. Add functionality to the *Start Over* button. When pressed, the page should return to its original state (how it was when the page first loaded).
3. Eliminate all alert statements in favor of on-page messages.
4. Enhance the styling of the page by using HTML5 and CSS3 features.
5. **(Advanced)** Make the page mobile-friendly (using CSS3 and jQueryMobile).
